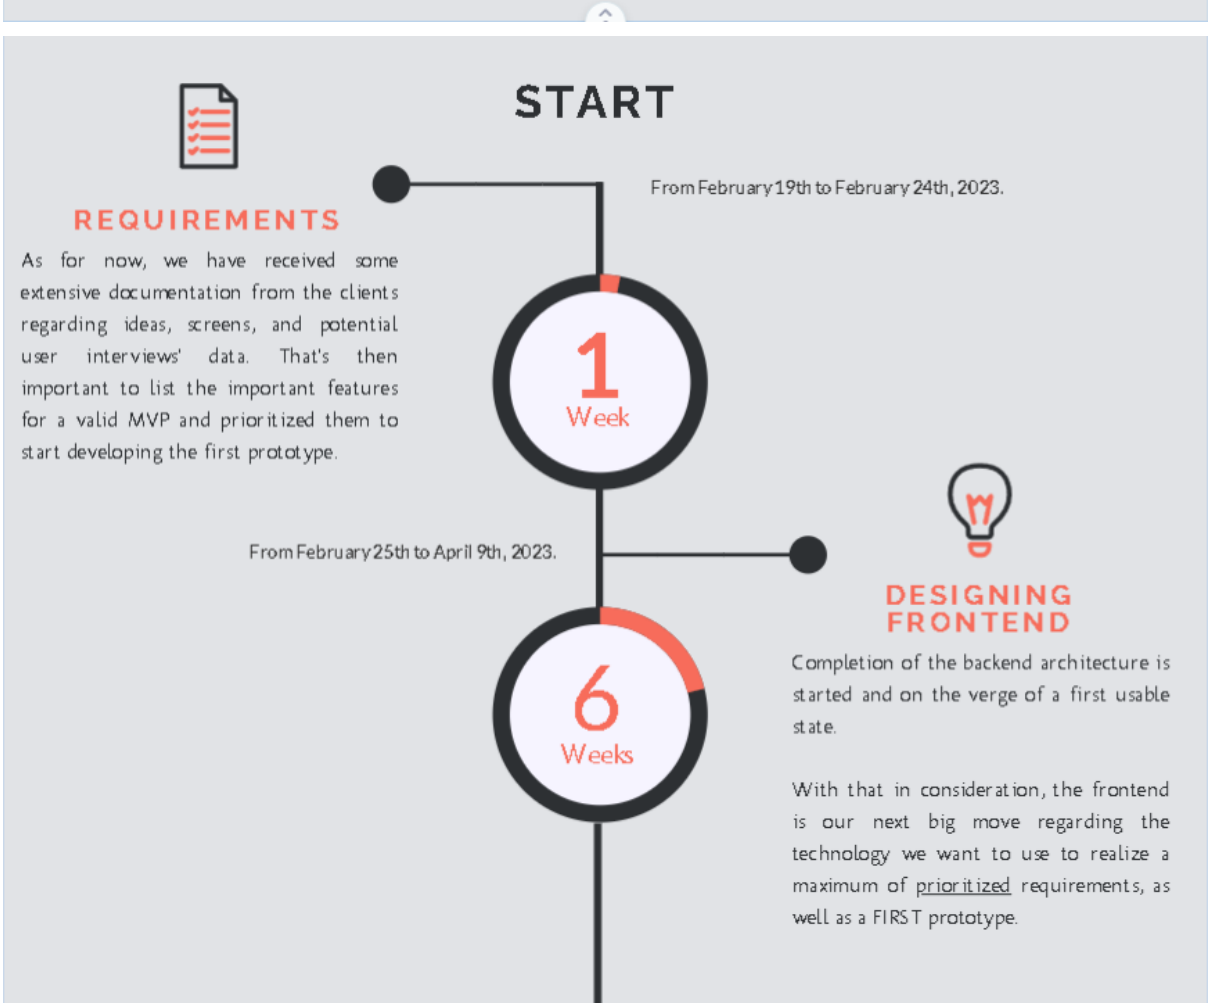
Downtown-App

DEVELOPMENT TIMELINE

V1

This is a rough timeline for the development of Downtown-App



From April 11th to June 10th, 2023.

CREATING MVP PROTOTYPE

With the first prototype out of the way. Applying some changes and updating the UI from the feedbacks will be next in the order of things.

With that, the implementation of the MVP prototype now becomes our main goal. This also implies some heavy lifting on the backend side to consider hosting solutions for the production environment to create what we could call a 'beta' for user testing.

9 Weeks

From June 11th to August 20th, 2023.

FINALIZING MVP

Again, applying updates and changes from the user testing takes the lead in term of prioritization. Furthermore, finalizing the MVP is now the top priority.

13 Weeks

From August 21st to November 19th, 2023.

IMPLEMENTING FINAL REQUIREMENTS

Once the MVP is accepted, or at least requires some minor updates and/or changes, we can now start to implements the less important feature like mobile application, and details.

5 Weeks

From November 20th to December 22nd, 2023.

DISTRIBUTING AND TRANSFERING PRODUCT

Using the last few weeks of the project term, we'll create deployment documentations and well as transferring owner ship of the code and external accounts.
